

WEB PUBLISHING SYSTEM

Flexibility and security

WPS is the perfect marketing and communications platform that makes the most of the Internet's reputation as being the fastest and most dynamic media of the world today. All WPS solutions include a search engine optimisation tool that maximises the search engine's display of the website.

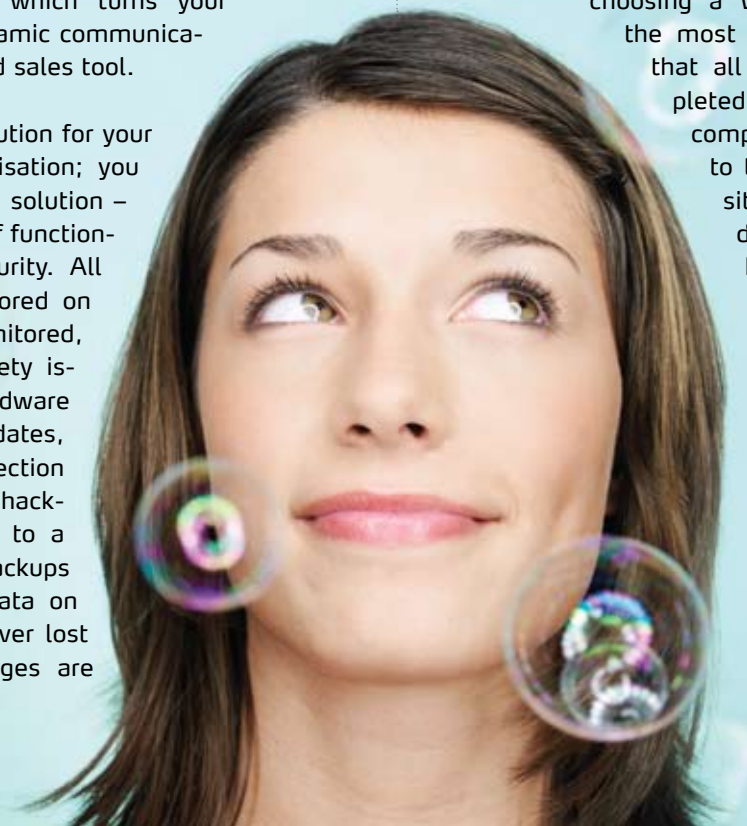

We offer you a selection of practical and user-friendly modules, which turns your website into a dynamic communication, marketing and sales tool.

Choose a WPS solution for your company or organisation; you will receive a total solution – not only in terms of functionality but also security. All of your data is stored on a constantly monitored, secure server. Safety issues such as hardware and software updates, backup and protection against viruses or hacker attacks is kept to a minimum. Daily backups ensure that the data on your website is never lost and that all changes are tracked.

We will always implement the newest technology as part of your WPS solution. WPS – Web Publishing System™ is constantly being developed with new modules becoming available and improvements to help satisfy our customer needs and expand your possibilities.

Of the many advantages you get from choosing a WPS solution, one of the most significant is the fact that all maintenance is completed on-line. If you have a computer and a connection to the Internet your website can always be up to date.

It really is that simple!

User friendliness

The WPS Content Management System is an on-line administration system that gives you the power to control all of the content on your organisation's website.

Owing to WPS's unique and user-friendly editing tool, any authorised employee in a company utilising a WPS solution can easily create menus, write articles, update news or perform other tasks to manage the entire website in a skilful, simple and professional manner. All of this can be learnt during a short introduction.

If your company or organisation has decided to make the Internet an important part of your overall marketing program, due to its fast, effective and cost-effective nature, you should choose a professional Content Management System. Why not take a closer look at WPS – Web Publishing System™?

A WPS solution is a quick and efficient way to achieve a dynamic and professional website, which modern marketing and communication demands. We ensure our customers receive just that - by offering a web solution that is flexible, usable and has the ability to be tailor-made to suit the individual needs of any company or organisation.

A website solution supplied by WPSnet can start at a basic level, while additional modules and administration licences can be added as and when the need arises. If the company decides to utilise the e-shop, payment gateway, newsletters, member areas or any other module, they can be delivered within hours without reducing functionality or closing the website. Our WPS – Web Publishing System™ is plug 'n' play!

Up-to-date design concept

By not only providing you with a tool to keep your website up to date, user-friendly and dynamic - we also deliver a wide selection of innovative and creative design solutions, which can be customised to your organisation or company's individual image. If you have special requirements or have an existing design, which you would like to utilise and update, we can offer tailor-made solutions containing sound, Flash, banners and easy integration with any of the available modules. Our design consultants will be happy to fulfil special requests, needs or unique demands.

WPSnet International

Since 2001, WPSnet International has been among Europe's leading CMS companies, developing WPS – Web Publishing System™ and providing Internet solutions and websites to businesses around the world. From the head office in Denmark, WPSnet International operates in a number of countries, each with their own sales offices and professional, knowledgeable staff.

The company's vision has always been to supply companies and organisations worldwide with one of the most functional, secure and user-friendly CMS solutions available, enabling them to take full advantage of the website as a marketing tool and provide a very personal and professional service, making loyal new friends – not simply adding clients to the portfolio.

By combining our offices in Europe, Asia, and the Americas with native speakers of English,

Spanish, Thai, Chinese, Hungarian, Danish and German, WPSnet International is always available to provide support its clients around the world and around the clock. Service is the keyword and we believe that good service makes the difference. We continue to establish new sales and support offices, and make WPS available in local languages to cover the needs of our clients.

WPS – Web Publishing System™ is one of the only Content Management Systems available that can deliver multiple language versions of your website as standard. We currently provide translation in Danish, Spanish, English, French, German, Chinese, Hungarian, Norwegian, Japanese and Thai.

We are constantly adding more features as requests are received from our customers.
